

CAPABILITY STATEMENT

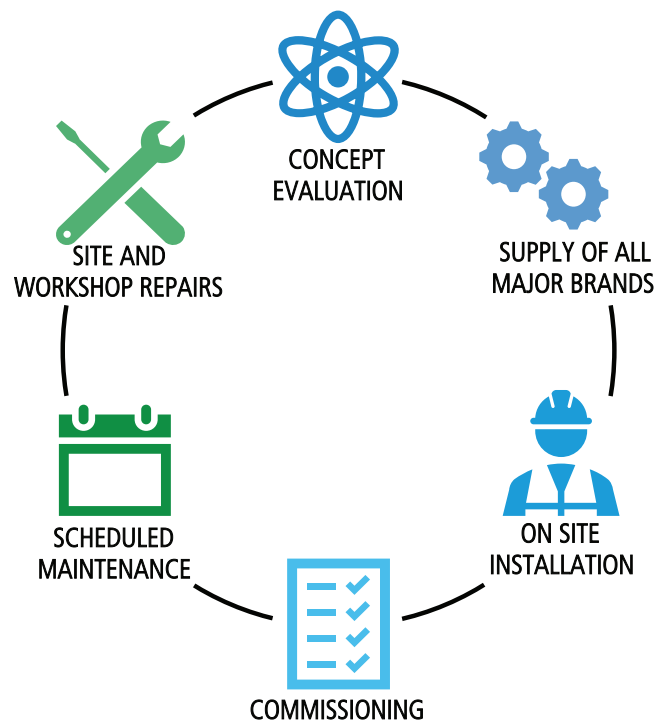

ABOUT US

Here at Netco Pumps we offer specialist expertise in the supply, installation and maintenance of pumps and pumping systems.

We provide complete turnkey solutions, working with you beyond the initial project stages of supply and installation. We back our customers up with reliable, efficient responses for the complete service and maintenance of pumping equipment. Our services include root cause analysis, process improvements, on-site and workshop services through our statewide network of technical expertise.

OUR MISSION

“ To facilitate the correct pumping solutions through experience, innovation and integrity. ”

OUR VISION

Our vision is to build a brand that exemplifies a dedication to customer satisfaction and portrays qualities that are perceived as valuable by all. The Netco brand is to represent a clear passion for delivering the best possible customer experience.

OUR VALUES

We believe in honesty, integrity, transparency and attention to detail. Our beliefs are driven by enthusiasm, hard work, team spirit and self improvement through training and dedication to principles.

We believe that anything is possible if you are willing to work for it, and that reward will surely follow effort.

TOTAL PUMPING SOLUTIONS

Netco's capability in total pump station supply is comprehensive including industry approved pre-fabricated structures through to complex custom built projects.

Netco will supply and install the complete station including concrete works, pumps, pipework, valves, overflow chambers, electrical controls and all ancillary items. We believe in working with our clients beyond the initial project stage, including commissioning, and backing our customers up with reliable, efficient and prompt responses for service and maintenance.

Netco has successfully supplied, installed, commissioned and serviced many various pump station configurations including municipal sewer and storm-water stations, booster pump stations, pump stations for industrial wastewater and floodwater harvesting systems.

POLYETHYLENE & FIBREGLASS STATIONS

Netco manufactures and supplies a full range of fibreglass and polyethylene packaged pump stations for sewer and stormwater applications.

Netco polyethylene & fibreglass packaged stations are a very fast, effective and economical solution for projects involving smaller subdivisions, industrial complexes or even simple lifting stations for single dwellings.

STORMWATER IMPROVEMENT & WATER REUSE

Stormwater improvement and water re-use is a fast growing sector as responsible communities look at ways to preserve and re-use our planet's most valuable resource.

Netco has been involved in some of the highest profile projects in Australia including greywater re-use via a green roof on a Melbourne Skyscraper, water re-use for pet wash-down at a major RSPCA complex and the Glenorchy Stormwater re-use project supplying processed storm water to the Nyrstar Zinc Smelter.

Netco can offer many different types of processes including passive stormwater improvement devices, conventional filtration, oil-water separators, ultra-filtration, reed bed technology and gross pollutant traps. Different forms of sterilisation can also be offered, including ultraviolet, chlorine dosing and ozone treatment.

PANEL TANKS & FIRE PUMPS

Water storage and pumping applications go hand in hand.

Netco supplies and installs a range of steel panel tanks for all industries. Panel tanks are a fast, effective and economical method of water storage, available in galvanised steel, stainless steel and painted surgages. Tanks can be circular or rectangular and are available with all options for inlets and outlets. Large tanks are built on the ground using a jacking system, making for a safe and efficient installation.

Netco also supplies the complete package when it comes to fire protection. Netco Fire Protection Panel Tanks are built to the Fire Code and can be supplied with a wide range of diesel and electric fire pump packages.

MINE DE-WATERING & PROCESS

Netco is at the forefront when it comes to supporting the mining industry in de-watering projects and process applications.

From high-head specialised de-watering to the supply of tough portable sludge pumps, Netco can assess your process and offer the best solutions, whether it be efficiency, corrosion, abrasion or mechanical breakdown that is costing you money.

Netco supplies a range of pumps suited to the mining industry including slurry pumps and wear parts, dredging pumps for excavators, peristaltic sludge pumps, portable de-watering pumps and pontoon pump stations.

PUMPED HYDRO

Netco is a key Australian partner with Sulzer Pumps which has a long history with pumped storage projects worldwide.

With the rapidly increasing renewable energy capacity in the grid, Sulzer now focuses on small decentralized pumped storage plants schemes that fall within the range of 2 and 20 MW, with flows up to 10 m³/s and TDH up to 1,000 m.

Sulzer's experience in Pumped Hydro is strengthened in Australia by Netco Pumps experience in the construction of large pumping stations and water transport projects.

A pump can be installed as a turbine to generate power in several applications including within pumped-storage plants, small hydroelectric schemes, and as energy recovery devices in various municipal and industrial applications.

SOLAR BORE PUMPS

Solar Pumps for bores are becoming very popular in regional Australia and in applications where mains power is not available or expensive to facilitate, often replacing traditional windmill installations.

Netco Pumps is experienced in the design, supply and installation of solar bore pumping projects for stock water and general water transfer. DIY kits can also be supplied along with specialist advice and guidance for those wanting to undertake the installation themselves.

FROM SINGLE PUMP TO A COMPLETE STATION

Over the years Netco has built strong relationships with all major pump manufacturers globally.

We thrive on a wide support base of suppliers and customers alike. Netco believes in being at the forefront of the ever progressive pump market and being able to deliver a project to the highest standard.

Whilst Netco is recognised in the market as a “total solutions” company, there is a parallel commitment to single pump sales, large and small. Whether a single domestic pump or large municipal pumping station, we are committed to working with you from concept to reality and beyond.
